

ABSTRACT

It is an object of the present invention to inhibit browning of a 5-aminosalicylic acid solid preparation, and to maintain for an extended period the properties of the 5-aminosalicylic acid solid preparation the same as they were at the time of the manufacturing the preparation. The present invention provides a solid preparation obtained by formulating 5-aminosalicylic acid or a salt thereof and a discoloration inhibitor into a drug product, wherein this solid preparation exhibits a color difference in a CIELAB color space being 10.5 or less before and after storage at 80°C for one week. The above-mentioned discoloration inhibitor contains at least one selected from the group consisting of a thiol compound, a sulfide compound, an acid anhydride, and a hygroscopic compound.
